Letter of compliance SVHC

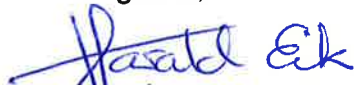

Substances of Very High Concern (SVHC) are a categorization in REACH for certain substances based on their carcinogenic, mutagenic, reproductive toxicity or bio-accumulative properties. These substances are not of themselves banned from the market as a consequence of REACH legislation, although some may later be selected for prioritization and possible authorization.

Should a substance designated by the European Union as a SVHC be present in our nickel, cobalt, copper, sulphuric acid and precious metals, we are obliged to advise all downstream users.

We can confirm that we are fully compliant with the obligations of the REACH legislation, including the management of SVHC. We follow this legislation closely as well as any updates on the Candidate List. Should any substance in the Candidate List be found in our products or packaging, we will promptly advise you. We can confirm that none of these substances are present today.

Glencore Nikkelverk has been ISO 9001 certified since 1994. We are also ISO 14001 certified (since 2000), OHSAS 18001 certified (since 2008) and ISO 50001 (since February 2016)

Regards,

Harald Eik
Director HSE & Quality
Glencore Nikkelverk AS
Kristiansand, Norway
